EDUCATION

University of Oxford — MEng Engineering Science

Expected 2030

Incoming first-year student. Relevant areas: probability, computing, electronics and applied mathematics. *Replace this line with verified grades, awards or modules only.*

SELECTED PROJECTS

ETF Momentum Research | Python, pandas, NumPy

2011–2026

- Built a reproducible 24-ETF, monthly 12–1 momentum backtest with a one-trading-day signal lag, explicit 10 bps one-way trading costs, research/out-of-sample separation and cached raw data.
- Benchmarked equal-weight, momentum, inverse-volatility and 200-day SPY regime-filter variants; reported CAGR, volatility, Sharpe, drawdown and turnover, while documenting selection, execution and capacity limitations.

Option Pricing & Hedging Lab | Python, Monte Carlo

2026

- Implemented Black–Scholes prices and Greeks, Monte Carlo valuation and finite-difference checks; unit-tested put–call parity, convergence and numerical Greek error bounds.
- Simulated daily and weekly discrete delta hedging under volatility misspecification and jump risk, focusing on P&L distribution and model-risk interpretation rather than a trading claim.

Applied Materials Equity Research | Fundamental analysis

2026

- Prepared a watchlist stock-pitch memo using FY2025 10-K and Q3 FY2026 disclosures; linked semiconductor-equipment process complexity, advanced packaging and service revenue to catalysts and disconfirming risks.

EXPERIENCE & LEADERSHIP

[Organisation / team] — [Role]

[Dates]

- [Use one evidence-based bullet: the task, your personal contribution, the method used and a verified outcome.]

[Organisation / team] — [Role]

[Dates]

- [Add a second genuine experience, engineering build, competition or leadership example. Do not invent metrics.]

SKILLS & INTERESTS

Technical: Python, NumPy, pandas, Git; [add SQL only if you can use it live]. **Finance:** quantitative research, derivatives simulation, company research. **Interests:** [one genuine interest that can start a conversation].

Template note: personalise every bracketed field and be ready to explain every completed bullet for two minutes.
